Field Service Engineer C&I

Do you have a passion for advanced technology, and do you want to contribute to the transition of a world powered by renewable energy? As a result of our continuous development and growth we are looking for an enthusiastic and motivated Senior Field Service Engineer, who is up for a new challenge!

Who are we?

VBR Turbine Partners is a trusted supplier of smart solutions, maintenance services and spare parts to operators of aeroderivative gas turbines across the Globe. Our technical maintenance experts work in the rapidly evolving global markets for natural heat & energy. Gas turbines will play an important role in the energy transition towards a carbon neutral society. VBR strives to realize outstanding performance and we will always aim to provide customers value and support beyond expectation. Our company culture is a rare mixture of an informal and friendly attitude combined with high standards of professionalism, ethics, and integrity. As an employer we encourage working in multi-disciplinary teams and we value everyone's contributions and experiences.

Where will you be working?

The Field Service department is formed by a dedicated and robust team of engineers. The Team consists of a balanced mix of both junior and senior engineers who are specialised in the field of mechanical or controls & instrumentations. Together with this specialised team, you will travel to customers all over the Globe. Working approximately 50% of the time in the Netherlands and 50% abroad, which ensures that you have a good work-home balance.

What are you going to do?

As a Senior Field Service Engineer you are the technical expert in the field of controls and instrumentation, with challenging work activities on LM gas turbines. In this position, you have an admirable role and you will guide and support your less experienced team members in the daily course of events to make sure all work activities can be fulfilled correctly, safely and with highest quality. You will support the engineers with inspections, installations, maintenance, testing and trouble shooting activities to LM gas turbine and/or related systems. As an experienced engineer, you will also represent our company at customers' sites. develop and maintain long-lasting relationships with our customers.

Who are you?

This function requires you to be well organized and extremely flexible. You have strong technical and analytical skills, but also can be creative where required. The work of a Senior Field Service Engineer requires not only technical insight, but also strong communication and teamleadership skills are essential. Key requirements are:

- Higher professional education level Engineering, or a relevant technical vocational education;
- 5 years of experience within field service activities in the area of gas turbines;
- Knowlegde and experience with measuring & control technology;
- Resident in the Netherlands or willing to relocate;
- Master the English language both in spoken and written forms.

What do we offer?

VBR offers a working environment where your opinion counts, you are given freedom in your work and attention is paid to your professional development. At VBR you are part of a professional organisation with an informal atmosphere and you will be working in a close and ambitious team. Besides offering a great working environment, we offer a good salary and attractive benefits.

Enthusiastic?
