

Working at VBR Turbine Partners

Our market position

VBR Turbine Partners are trusted suppliers of smart solutions, maintenance services and spare parts to operators of aeroderivative gas turbines across the world. Our technical and digital maintenance experts work in the rapidly evolving global markets for natural and renewable resources, heat & energy. Gas turbines will play an important role in the energy transition towards a carbon neutral society by 2050.

How we work with each other

VBR strives to realize outstanding performance and we will always aim to provide customer value beyond expectation.

Our company culture is a rare mixture of an informal and friendly attitude combined with high standards of professionalism and ethics. As an employer we encourage working in multi-disciplinary teams and we value everyone's qualities and contributions.

Jobs @ VBR

We are continuously looking to employ experienced engineers and recently graduated young professionals, preferably with a background in aircraft engines, aeroderivative gas turbines or control systems, especially Speedtronic & Woodward.

What is it like to work at VBR?

Expect a customer focused professional maintenance service company with attention for personal development, a healthy work-life balance and an informal & friendly company culture.

Quotes Employees “

VBR is a pleasant employer for me because of the informal working atmosphere and organization structure. The social activities that are regularly organized outside working hours ensure a close and pleasant team.

Erik, Field Service Coordinator

I experience VBR as a result-oriented customer-focused company. But beside heading every day for success, VBR still feels "family-like" to me. I enjoy the given flexibility and trust performing my job as a Consultancy Director.

Christian, Consultancy Director

VBR is a flat organisation with short reporting lines. We are encouraged to bring initiatives and new ideas. Therefore we have the opportunity to make a difference. It is nice to work in a powerful industry, including all the high end tooling.

Jan Willem, Overhaul Facility Engineer

From the day I joined VBR, I have found my colleagues to be very open and welcoming. Without exception, everybody is very helpful in answering any questions with an open door policy, where also, everybody's input is valued and encouraged.

Clement, Field Service Engineer

Quotes Internships “

I think that as a trainee you are in good hands when you start working at VBR. You work with high-tech equipment, you learn a lot and you receive excellent supervision throughout the internship period. At VBR I was treated as an employee and I was expected to actively participate and think with the service engineers while performing actual work on the machines.

Ersin, Student Deltion College

My experiences at VBR are positive only. The jobs abroad that I worked on were very educational and interesting. The engineering department is a very close group of people with whom you can always laugh and work very hard to get the job done. The combination of these two elements has made it a very fun and educational internship for me.

Tim, Student from Deltion College

I have experienced a very inspiring and dynamic internship at VBR Turbine Partners: developing programming skills, participating in a gas turbine training course, revising and testing valves and performing hands-on field service work in Italy.

Jeff, Graafschap College Doetinchem

The supervision was very good with sufficient freedom to work on my assignment. When I had questions or needed help there was always someone available to support me. I have had a great time here!

Bauke, ROC Nijmegen

Accredited training company

VBR Turbine Partners is an accredited work placement company and we are proud of this accomplishment. As accredited professional training institute we form an indispensable link between professional practice and technical education.

We contribute to further professionalization of the international technical maintenance industry by offering graduation internships to talented and motivated students. Our accreditation covers both short-term and long-term internships for established technical and professional education institutes in The Netherlands.
